Kentucky State Law requires healthcare providers to obtain your **INFORMED CONSENT** prior to examination and treatment. The purpose of this form is to inform you, not alarm you. What you are being asked to sign is confirmation that you have been informed of the following:

Examination & X-rays: this office uses highly sensitive x-ray film, intensifying screens, and filters that provide high quality x-rays with the lowest possible x-ray exposure. The only noteworthy risk with taking x-rays deals with pregnancy. If there is any possibility that you are pregnant, inform us prior to any x-ray examination. If there is no possibility of this condition, the inherent risks are so rare that we have no available statistics to quantify their probability.

PLEASE CIRCLE ONE AND INITIAL: I AM / I AM NOT pregnant at this time / Does Not Apply Initial: ____

****

Chiropractic Adjustment/ Chiropractic Manipulative Therapy (CMT): The doctor will use his hands or a mechanical device upon your body in such a way as to move your joints in various directions. This procedure may cause an audible "pop" or "click" to be heard coming from your joints, which is not cause for alarm. **There are some material risks involved in doing these procedures as they are as follows:**

-Pain: Chiropractic treatments may result in a temporary increase in soreness in the area receiving treatment.

-Rib Fractures: Fractures caused by chiropractic care are rare. They occur most frequently in patients with osteoporosis or weakened bones. Evidence of osteoporosis can be noted on your x-rays, and if detected, the most appropriate, gentle treatments are used, minimizing the possibility of fractures to the ribs.

-Disc Injury: Chiropractic treatment is appropriate for the treatment of many kinds of back problems, including some disc problems (1). Occasionally, chiropractic treatment may aggravate or cause a problem if the disc is in a severely weakened state. However, this occurs so rarely that statistics to quantify the probability are unavailable, but estimates place the risk of serious injury *about 1 serious complication per 100 million low back manipulations* (2).

- Vertebral Artery Dissection (VAD)/Stroke: The overall incidence of vertebral artery dissection leading to stroke in the general population is about *2 per 1000 people* (3). Although chiropractic adjustments/manipulation has been implicated as a possible cause of stroke, this possibility is very rare. The best available data suggests that a stroke is secondary to chiropractic adjustment/manipulation may occur 1 per 500,000 patients (4)-a rate well below the overall risk in the general population. In comparison, the overall risk of death from taking non-steroidal anti-inflammatory drugs (i.e. Aspirin, Ibuprofen, Naproxen Sodium, etc.) is 4 per 10,000 patients (5). The risk of serious complications or death from spine surgeries of the neck is 11.25 per 1,000 patients (5). As you can see, the risk of stroke from chiropractic treatments is much lower than other common medical treatments. Even though the risk is small, we have implemented procedures and tests that will likely reduce the potential for stroke even more.

-This list is of side-effects is not exhaustive and there could be other negative side-effects of various treatments rendered in this office.
